HPT to Exhibit at the AHR 2017 Expo In Las Vegas, NV

2017 AHR EXPO®

Heat Pipe Technology, Inc. will be exhibiting at the AHR 2017 Expo January 30th through February 1st at the Las Vegas Convention Center, booth no. C5434. This year's expo will include over 60,000 HVAC professionals and 2000 exhibitors who will showcase the latest products from around the world.

This newsletter is a service of HPT, Inc. It is meant to familiarize users with heat pipe technology, and how to select heat pipe systems using SelectPlus™ design software.

A direct pipeline to savings

HPT Recently Announced the Release of a New Product within the Energy Recovery Line and Upcoming Certification

This year starts off with the unveiling of a new product known as the HRM-Z. In many cases, depending on the application and where the project is located, one season of recovery offers considerably more savings than the other. With that in mind, HPT has introduced an Optimized HRM (Model HRM-Z), which has been designed to maximize performance during the season that matters most. The adjusted HRM-H performance will still provide a similar effectiveness during both heating and cooling modes, but the HRM-Z may be the best option when heating mode energy savings outweigh cooling mode savings, or vice versa.

Not only did HPT release a new product to the market, but we are also aiming to provide AHRI certification on our heat recovery line, as well as offering DLLs to our valued OEM's who wish to implement our SelectPlus™ capabilities into their own software. We hope to have certification and DLLs by mid-2017. For more info, please follow the link below.

Update HPT Recently Shipped Several Wrap-Around and Energy Recovery Heat Pipes to an Overseas Casino Resort

HPT recently shipped several wrap-around and energy recovery heat pipes for the third phase of a casino complex located in South East Asia. The units for the first and second phases of this project were shipped out in September 2016 and we expect a fourth and final phase later this year. Our heat recovery heat pipes were the product of choice for this casino environment due to cross-contamination concerns of the outside air with smoke laden exhaust air and no moving parts.

Updates on the fourth phase of this project to follow in future editions of Solutions Newsletter...
